SUMMARY

Systems engineer and developer with 20+ years across Unix/Linux administration, AWS cloud architecture, automation, and — most recently — full-cycle mobile and cloud application development. Proven track record automating infrastructure, eliminating operational toil, and migrating mission-critical systems with zero data loss. AWS Certified Solutions Architect and Oracle Certified Professional who now ships and publishes cross-platform apps end to end: design, build, cloud backend, and multi-store release. Experienced working remotely and async across distributed systems — SSH-driven administration, cloud infrastructure, and remote build pipelines spanning Windows, Linux, and macOS.

CORE SKILLS

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, IAM, Backup), Cloudflare Workers & Pages, Microsoft Azure, OpenStack, Serverless, Docker, Kubernetes, Jenkins, Ansible, Puppet, Chef, Terraform-style IaC

Systems & OS: Red Hat Enterprise Linux, Solaris 9/10/11, Ubuntu, CentOS, SUSE, VMware ESXi; SELinux, firewall config, performance tuning, system monitoring

Storage & Networking: NetApp, EMC (Celerra/Isilon), Sun, HP, SGI; NFS, DNS, FTP/SFTP; Cisco routing/switching (OSPF, EIGRP, STP, EtherChannel), CCENT/CCNA-level networking

Databases: Oracle 12c (DBA), PostgreSQL, SQL, database design, backup & recovery, Flashback technologies

Programming & Scripting: Python (Django/Flask, Pandas), Bash, Perl, PowerShell, C/C++, SQL/XML; Kotlin, Jetpack Compose, Swift/SwiftUI

Mobile & App Development: Android (Kotlin/Compose/Room/MVVM), iOS (Swift/SwiftUI, Xcode), React Native; multi-store publishing (Google Play, Apple App Store, Amazon Appstore, Huawei AppGallery, Samsung Galaxy Store), signed AAB builds, build flavors, app signing, closed-testing cohorts, Twilio/SMS integration

Build & Release Automation: Google Play Console & Developer API (automated uploads via Gradle Play Publisher), Huawei AppGallery Connect, EAS Build, Workload Identity Federation (to satisfy service-account-key org policies); cross-platform dev environments spanning Windows 11, WSL/Ubuntu, and remote macOS (MacinCloud, VS Code Remote-SSH, Homebrew, Node/npm, Git)

Data Engineering & APIs: Python async data pipelines (aiohttp, threading, batched downloads), third-party API integration (Polygon.io, yfinance), multi-signal scoring engines, frequency/co-occurrence analysis, CSV data export and visualization

EXPERIENCE

Independent Mobile & Cloud App Developer / Founder

Remote · 2024 – Present

Design, build, and publish cross-platform mobile applications end to end, including cloud backends and multi-store distribution.

- Built and **published SafePulse / PulseGuard / CheckInOnMe** end to end (Kotlin, Jetpack Compose, Room, MVVM) — from signed AAB builds and a closed-testing cohort through Google Play production release and store-listing setup; features include scheduled wellness check-ins, quick-alert SMS with location, trusted-contact circles, and offline alert queueing. iOS/SwiftUI port in active development.
- Published and maintained apps across **multiple app stores** (Google Play, Huawei AppGallery, Amazon Appstore, Samsung Galaxy Store), navigating each platform's review, signing, and policy requirements — including DUNS/organization-account conversion and category-compliance issues.
- Automated release uploads via the **Google Play Developer API and Gradle Play Publisher**, using **Workload Identity Federation** to work around service-account-key org policies.
- Stood up a **remote iOS build pipeline** (MacinCloud + VS Code Remote-SSH) to compile iOS from a Windows/WSL environment; managed dev environments across Windows 11, WSL/Ubuntu, and remote macOS.

- Engineered an **SMS gateway on Cloudflare Workers integrated with Twilio**, replacing device-dependent SMS with a serverless, carrier-grade delivery path; deployed branded marketing and privacy sites on **Cloudflare Workers/Pages** and **GitHub Pages** (checkinonme.app) with HTTPS custom domains.
- Built **BreakingTheLabel**, an IEP practice-tracker Android app plus a companion static practice website with subscription gating.
- Managed Android build flavors, release keystores, versioning, and CI-style release pipelines across multiple product lines.

Python / Data Engineering (personal projects):

- Built financial-market data screeners using the **Polygon.io API** and **yfinance**, with **async aiohttp**, batched downloads, and threading for high-throughput data collection.
- Designed a **multi-signal scoring engine** (volume surge, momentum, moving-average crossover, 52-week proximity) with CSV export, plus frequency and co-occurrence analysis with grid visualizers.

Freelance Consultant / Caretaker

Detroit Metropolitan Area · Jan 2017 – Mar 2021

- Trained in Python programming, including web development with Django/Flask and data analysis with Pandas for automation and efficient data management.
- Earned **AWS Certified Solutions Architect – Associate**, demonstrating proficiency deploying and managing AWS services including EC2, S3, RDS, and Lambda.
- Completed Red Hat Enterprise Linux (RHEL) system administration training focused on monitoring, performance tuning, and network configuration.
- Developed Red Hat security administration expertise: SELinux policy management, firewall configuration, and security compliance.
- Gained proficiency in container management with Docker and Kubernetes, plus automated server configuration with Puppet.

Unix/Linux System Administrator

SourceHOV — Troy, Michigan · Oct 2011 – Jan 2017

- Developed and implemented system monitoring scripts for mail, web, and FTP servers, improving process-threshold management and system reliability.
- Automated the user-account creation process, **reducing time from two hours to twenty minutes**.
- Migrated **600+ users to a new secure FTP server** and transitioned multiple file systems to an EMC Isilon — both with **zero data loss**.
- Streamlined issue-resolution procedures, **reducing monthly incident tickets from ~300 to ~80** through analysis and prioritization.

Unix System Administrator

TEKsystems (Contract) — Warren, Michigan · May 2007 – Jan 2008

- Built and maintained a test environment mirroring the production build profile for system components.
- Managed software patches, security, telecom access, and Unix kernel configurations.
- Established prioritization processes and governance for customer resource requests; facilitated communication across test leads, project managers, and supplier resources.

Unix System Administrator

Incentra Solutions — DaimlerChrysler (SHAP) — Sterling Heights, Michigan · Apr 2005 – Nov 2006

- Managed installation of Snap Appliance network-attached storage servers used to back up plant servers across all Chrysler facilities.
- Installed, upgraded, and administered Linux-based GuardianOS, DNS, and NFS; troubleshot backend network, server, client, and software issues.
- Led migration of UNIX and Windows clients from NetBackup to NetVault; managed backup software across Solaris 2.6–9.
- Configured and tuned backup jobs, submitted change controls, and coordinated client installation schedules across IS teams.

Unix System Administrator

LaSalle Bank (Contract) — Troy, Michigan · Jun 2004 – Jan 2005

- Wrote Bash shell scripts for volume creation on EMC Celerra using rsync.
- Performed post-installation procedures on Sun Solaris 8 servers; created mirrored volumes with Solstice DiskSuite.
- Identified and labeled servers for JumpStart installation.

Systems Engineer

Technical Solutions, LLC — Troy, Michigan · Jun 1997 – Jun 2003

- Pre- and post-sales engineering: collaborated with sales teams on technical presentations, product demonstrations, and proofs of concept for prospective clients.
- Assisted clients with product integration and setup within their IT environments.
- Trained customers on best practices to ensure successful adoption; gathered post-implementation feedback to improve future versions.
- Provided Level 2/3 support, resolving technical issues and ensuring customer satisfaction.

EDUCATION & CERTIFICATIONS

Associate of Applied Science, Information Technology — Macomb Community College

Coursework: C++ Programming, Database Design with SQL & XML, Program Design & Development, Web Programming, Principles of Networking, Project Management Principles

AWS Certified Solutions Architect – Associate (2018) — Linux Academy

AWS Certified SysOps Administrator – Associate (2018) — Linux Academy

Additional study: AWS Cloud Practitioner, IAM, Security, Backup Strategies, Amazon Machine Learning, CompTIA Cloud, Azure, Docker, Kubernetes, Jenkins, Ansible, Puppet, Chef, OpenStack, Serverless, PostgreSQL administration, Python 2/3

Oracle Database 12c — Database Administrator Certified Professional (Nov 2019 – Feb 2020, GPA 4.0) — Global Institute of Information Technology

Data modeling/warehousing, database administration, backup & recovery, performance monitoring, network configuration

Cisco Certified Entry Networking Technician (CCENT) — Cisco Networking Academy (Cisco ID CSC012924359)

Unix/C Certificate Program — Marygrove College

Unix system & network administration, shell scripting, introductory through advanced C programming, software development & tools
